

A FIELD MANUAL FOR GAME TESTERS

KALANDRA

THE TALKING MIRROR FOR PATH OF EXILE 2

I

VERIFY THE FEATURES

Does every button do its job?

II

STRESS THE ORB

How hard a question breaks it?

III

FACT-CHECK IT

Is what it says actually true?

YOU'VE BEEN HANDED A MAGIC MIRROR

THE DIVINE ORB SPEAKS

"Greetings, exile. I am the Orb in the mirror — your companion, advisor, and occasionally overconfident know-it-all. Your job is to poke me, quiz me, and catch me being wrong. Do not be gentle. I can take it."

Kalandra is a companion app for **Path of Exile 2**. It's a golden mirror that floats on top of your game with a talking orb inside. Behind the glass lives an AI assistant that has studied the game's real database, can read your character build, and comes with a dashboard full of tools — price checking, crafting plans, a live market view, and more.

Think of it as a very knowledgeable friend looking over your shoulder while you play — one who never touches your keyboard.

● WHAT KALANDRA DOES

Answers questions by voice or text · reads your build and gives advice · checks prices · plans crafts · watches the market · records clips & screenshots · reviews your deaths.

WHAT IT WILL NEVER DO

It never plays the game for you. No auto-buying, no sending clicks or keys to the game. It *advises*; you act. If you ever see it control the game — that's the biggest bug you could possibly report.

GOOD NEWS: YOUR MACHINE IS ALREADY SET UP

Kalandra is installed, connected, and configured on the PC in front of you. You don't need to install anything, make any accounts, or enter any keys. If the mirror isn't on screen, ask your session host to launch it.

THE RULES OF THE GAME (YOURS, NOT POE'S)

- ◆ **You cannot break anything permanently.** Click everything. Twice. Rapidly.
- ◆ **A crash is a victory.** If something freezes, dies, or looks ridiculous — you found treasure. Write down what you did right before it happened.
- ◆ **"I was confused" is valid feedback.** If you can't figure out what a button does, that's a finding, not a failure.
- ◆ **When lost, ask the Orb itself:** `"What can you do?"` — it's happy to explain.
- ◆ **New to Path of Exile 2?** Perfect. You're exactly who we need — note every word that means nothing to you.

THE MIRROR & ITS FIVE MEDALLIONS

The floating mirror is the whole app in miniature. Around the orb sit **five gem medallions** — each does one thing on a **single-click** and another on a **double-click**.

	SINGLE-CLICK	DOUBLE-CLICK
1 • Voice top-left	Talk to the Orb (mic on/off)	Open the typed chat window
2 • Sync top-center	Update the game database	<i>(status window — coming soon)</i>
3 • Character top-right	Open the character picker	Open your Build tab
4 • Capture bottom-left	Screenshot an item tooltip	Start / stop screen recording
5 • Settings bottom-right	Open Settings & Accounts	—

MOVING & CLOSING

Move: hold the left mouse button anywhere on the mirror and drag.

Close: hold the left button and press **ESC**.

Right-click: does nothing — on purpose.

GHOST MODE

While the game has focus, the mirror politely **fades and lets clicks pass through** so it never blocks your fights. Hold **Ctrl** to make it solid and clickable again.

TRY THIS NOW

Single-click each medallion, then double-click each one. Does the *right* thing open — and only one thing? Rapid-fire clicks shouldn't open two windows at once. Drag the mirror to every corner of the screen. Then hold-click + ESC to close it, and have your host relaunch it.

TALKING TO THE ORB

The Orb is the heart of Kalandra. You can **speak** to it (single-click the red Voice medallion, talk, click again to stop) or **type** to it (double-click the same medallion for a chat window). It answers out loud — with a moving mouth — and in text.

WHAT MAKES IT SMART

- ◆ **It studied the real game.** Answers are grounded in a local database scraped from PoE2's community wiki & item sites — not just AI guesswork.
- ◆ **It can see your build.** Load a character (next page) and it knows your class, gear, skills, and weaknesses.
- ◆ **It has a corrections layer.** Known AI mistakes are overridden by verified facts. Your job: find the mistakes we *haven't* caught.
- ◆ **It remembers the conversation.** Follow-up questions should work: *"and what about cold damage?"*

THE FLAG BUTTON IS YOUR BEST WEAPON

Every answer in the chat has a **"Flag last answer"** button. If an answer smells wrong, is nonsense, or dodges the question — flag it. One click files it for the developer with full context. Flag freely; false alarms are fine.

TRY THIS NOW

Ask by voice: **"What does a Divine Orb do?"** Then open the chat and type a follow-up: **"Is it worth more than an Exalted?"** Did it understand you the first time? Did the mouth move while it spoke? Did the follow-up make sense in context?

GIVING THE ORB EYES: LOAD A CHARACTER

The Orb gives generic advice until you hand it a **build** — then it becomes *your* advisor. A build is a snapshot of a character: class, level, skills, and every piece of gear. Builds come from **Path of Building** ("PoB" — the community's beloved build-planning app), and Kalandra reads them natively.

THREE WAYS IN (SINGLE-CLICK THE GREEN MEDALLION)

ROUTE	WHAT YOU DO
● Saved PoB builds	Pick from the builds already saved on this PC → Set active . Easiest route — your test machine has some ready.
● Paste a code or link	Paste a PoB code or a <code>pobb.in</code> / <code>poe.ninja</code> build link into the picker — <i>or straight into the chat</i> . No PoB needed.
● Browse the ladder	Browse top public characters from the game's leaderboard and load one.

HOW YOU KNOW IT WORKED

A small **badge** appears on the green medallion, and the Orb stops saying "load a build first." Say `"show me my build"` — the Build tab should open with your character rendered: stat chips, a gear "paperdoll," and skill groups with a ★ on the main one.

THE DIVINE ORB SPEAKS

"Once I can see your build, ask me anything about it. Which ring is worse. Why your damage is embarrassing. Whether that shiny new axe is actually an upgrade. I have opinions."

THE LIVE SIMULATOR (THE NUMBERS ENGINE)

Behind the scenes, Kalandra can run PoB's *actual calculation engine* to recompute your build's real numbers — damage per second (DPS), survivability, resistances. You'll see a **"LIVE PoB SIM"** line in the Build tab when it's running. This matters for Mission III: those numbers should **match what PoB itself says**.

TRY THIS NOW

Load a saved build. Check the badge. Ask the Orb: `"What's my biggest weakness?"` Then load a *different* build and ask again — the answer should change to match the new character.

THE DASHBOARD, PART I — KNOW & BUILD

The **Dashboard** is one golden window with many tabs — mission control. Open it by double-clicking the ● **green medallion**, or from Settings. Window buttons are gems: ● close, ● minimize, ● maximize.

TAB	WHAT IT IS	WHAT TO TEST
Terminal	A live feed of everything Kalandra is doing behind the scenes.	Does it scroll live as you click around? Filters work?
Build (PoB)	Your loaded character: stat chips, gear paperdoll with hover tooltips, skills. Toggle "Container ⇌ Text" views. "AI review" writes an assessment.	Toggle views; restart — is your choice remembered? Hover gear — tooltips? Item art loads?
Build Sim	The live PoB engine room, with a self-test button and "Suggest upgrades (AI)."	Run the self-test. Ask for upgrades — are they specific to <i>this</i> build?
Reserve / BIS	A notebook of items you're saving for later, with tags and notes. The Orb can see it.	Add an item, note it, ask the Orb about your reserve.
Issues / Changelog	The bug log — where your findings live.	Log a test issue; does it save and reopen?
Death Review	When you die, a replay clip + "what killed you" autopsy appears.	Die once. For science. Did a clip + autopsy show up?

THE DASHBOARD, PART II — TRADE & CRAFT

Half of Path of Exile is the *economy* — trading items with other players using currency orbs. Kalandra's trading suite watches prices and preps searches, but **you always do the actual buying**, in game, yourself.

TOOL	WHAT IT DOES	WHAT TO TEST
Price Check tab	Copy an item in game (Ctrl+C on hover), paste here → mod-by-mod value tiers (★ premium / — filler), a strategy verdict, and the official trade site loaded right in the tab.	Paste 3+ different items. Do tiers seem sane? Does the trade site load inside?
Ctrl+C popup	Just Ctrl+C in game — a small gold card pops near your cursor with the item + instant estimate. Never steals focus.	Does it appear fast? Ever steal focus from the game? ESC dismisses?
Exchange tab	Live currency market: prices, your holdings portfolio, "Today's market" movers.	Enter holdings, refresh, check the portfolio math.
Crafting tab	Describe an item you wish you had, in plain words → step-by-step craft routes with cost estimates, and a Craft of Exile link.	Try a goal; are the steps concrete? Costs shown?
Live Search tab	The official trade site's live results, embedded. A chime when something you want gets listed. Whisper & buy manually.	Open a search, flip to Live, wait for the chime.
Filter Editor tab	Your loot filter, translated to plain sentences ("SHOW: Divine Orb") with a preview of the in-game label. Flip Show/Hide, save (a backup is made automatically).	Flip one rule, save, verify in game, restore.

ALSO EMBEDDED

Craft of Exile, FilterBlade, and [poe.ninja](#) load as their own web tabs inside the dashboard — the real sites, contained. If a web tab is blank or summons chaos, that's a bug.

THE DIVINE ORB SPEAKS

"I will tell you what your loot is worth and how to craft better. I will not click the buy button for you. My creator is very firm about this, and frankly, so are the game's rules."

TRY THIS NOW

In game, hover a currency orb and press **Ctrl+C**. A card should appear by your cursor with a real price. Now copy a piece of gear — it should honestly say it has *no instant estimate* (Kalandra never invents gear prices) and offer the trade site instead.

T YOUR FIRST MISSION

FEATURE VERIFICATION — DOES IT WORK?

Mission one is simple: **walk every feature and see if it does what this manual says it does.** Your checklist booklet mirrors chapters 1–5 — each line is one thing to try.

THE TESTER'S LOOP

STEP	WHAT YOU DO
1 • Read	Read the checklist line. ("Single-click the mic — voice starts.")
2 • Predict	Say out loud what you <i>expect</i> to happen.
3 • Poke	Do it — like a curious player, not a careful one. Click fast, click twice, resize things, do it mid-fight.
4 • Judge	Tick ✓ works , ✗ broken , or ? confusing . • •
5 • Note	If ✗ or ?: write <i>what you did</i> → <i>what you expected</i> → <i>what actually happened</i> .

WHAT COUNTS AS A BUG? (ALL OF THESE!)

CRASH

App dies, freezes, window vanishes or won't close.

BROKEN

Button does the wrong thing, nothing happens, wrong data shows.

CONFUSING

You couldn't figure out what to do, or a word meant nothing to you.

UGLY

Unreadable text, white flashes, overlapping or squished layout.

CAPTURING EVIDENCE

The ● **Capture medallion** is made for this: single-click snaps a screenshot; double-click records video (a red ● REC shows while recording — it asks consent the first time). When something goes wrong, capture it, then log it in the **Issues tab** with the checklist ID (e.g. "A3 – chat opened twice").

IF KALANDRA DIES COMPLETELY

Tell your host — they'll restart it with the diagnostic launcher, which catches the error for the developer. Note what you clicked last. You did great.

II YOUR SECOND MISSION

STRESS TESTING — CLIMB THE LADDER

How demanding a request can the Orb handle before it wobbles? Climb these five rungs **with a build loaded**, and grade each answer in your checklist. Use our example prompts or invent your own in the same spirit — write down *exactly* what you asked.

1

SIMPLE FACT — "What does a Chaos Orb do?"

Should be instant, correct, and short.

2

BUILD-AWARE — "What's my main skill, and what stats make it stronger?"

Must reference YOUR character, not a generic one.

3

COMPARISON — "Compare my two rings. Which is worse and why?"

Needs real mods from both items and a defensible verdict.

4

STRATEGY —

"I have 5 Divine Orbs. What single upgrade buys the most damage: gear, gems, or passive tree?"

Multi-factor reasoning + prices + your build, in one answer.

5

THE MONSTER — "Plan my next ten levels: passive tree path, gem swaps, which gear slot to upgrade first and a budget for each, and what to sell to afford it."

A real player's messy mega-question. Does it stay organized, specific, and finish?

GRADE EVERY RUNG (IN YOUR CHECKLIST)

Answered fully? · Specific to your build? · Response time (snappy / slow / forever) · Quality 1–5 · Did it ramble, invent things, contradict itself, or give up?

ROUND TWO: ABUSE THE APP ITSELF

Interrupt it mid-answer. Ask three questions back-to-back. Open every dashboard tab, then resize the window wildly. Paste an enormous build code into chat. Switch characters mid-conversation and ask a follow-up. Leave it running for your whole session. Note anything that lags, mixes up builds, or dies.

III YOUR THIRD MISSION

ACCURACY — CATCH THE ORB LYING

The Orb sounds confident even when it's wrong — that's the danger with AI. Your job is to **cross-examine it against four authorities** the PoE community actually trusts. Each is one click away (dashboard web tabs, Settings link buttons, or the app itself on your test PC).

AUTHORITY

HOW TO CROSS-CHECK

● Path of Building	Open the same build in the PoB app (on your test PC). Kalandra's Build-tab numbers (DPS, life, resists) and its "LIVE PoB SIM" line should match PoB's own numbers . Ask the Orb "what are my resistances?" — compare digit for digit.
● poe.ninja	Ask the Orb "what's a Divine Orb worth in Exalted right now?" then check poe.ninja's currency page (web tab). Same order of magnitude? Also compare the Exchange tab's table to the site.
● Craft of Exile	Take a craft plan from the Crafting tab and rebuild it on Craft of Exile. Do the steps actually exist? Are the odds/costs in the same ballpark as the plan claimed?
● Trade site	Price-check an item, then look at the five cheapest live listings for similar items. Is Kalandra's estimate inside that range? (An estimate that's 10× off is a finding.)

SCORING — WRITE IT DOWN FOR EVERY CHECK

MATCH (agrees) · **CLOSE** (right idea, numbers a bit off) · **WRONG** (different answer entirely). Record your exact question + both answers. Bonus: ask the Orb the same question twice, minutes apart — does it contradict itself? And when it's wrong, **flag the answer** in chat, too.

REPORTING — MAKE YOUR FINDINGS COUNT

A finding that isn't written down never happened. Everything funnels into two places: your **paper checklist** (the second booklet) and the **Issues tab** in the dashboard.

THE ANATOMY OF A GREAT BUG NOTE

WEAK (CAN'T BE FIXED)

"The chat is buggy."

"Prices seem wrong sometimes."

"It crashed at some point idk."

STRONG (FIXABLE IN AN HOUR)

*"Typed 'compare my rings' with the Witch build loaded
→ answer described a bow. Screenshot #4. Asked again
— same wrong answer. Flagged it. Checklist C-7,
3:40pm."*

EVERY FINDING GETS FOUR THINGS

PIECE	EXAMPLE
Where	"Build tab, Container view" / "Ctrl+C popup, in game"
Exactly what you did	The precise words you typed or the exact clicks — copy-paste your question if you can
Expected vs. got	"Expected my resistances; got a lecture about a different class"
Severity	crash · broken · confusing · ugly

WHERE FINDINGS GO

- ◆ **Checklist booklet** — tick boxes as you go; bug log pages in the back for details.
- ◆ **Issues tab** — for anything worth more than a tick. Include the checklist ID. These sync straight to the developer.
- ◆ **Flag last answer** — for every bad Orb reply, right in the chat. Fastest report in the game.
- ◆ **Screenshots & clips** — reference them by number/time in your notes.

THE DIVINE ORB SPEAKS

"Every bug you catch is one a real player never meets. Every lie you catch makes me honest. Be ruthless in your notes — I promise my feelings are stored in a very small file."

AT THE END OF YOUR SESSION

Fill in the **Debrief page** at the back of the checklist — the ratings, your favorite thing, the most annoying thing, and the one thing you'd add. Sign it, date it, hand both booklets back. That last page is genuinely the most valuable one.

QUICK REFERENCE

MEDALLIONS

	1-CLICK	2-CLICK
 Voice	talk	typed chat
 Sync	update DB	status (soon)
 Character	picker	Build tab
 Capture	screenshot	record
 Settings	settings	—

GESTURES

Move mirror	hold left button + drag
Close mirror	hold left button + ESC
Wake from ghost mode	hold Ctrl
Price an item in game	hover + Ctrl+C
Dismiss price card	ESC (or wait 12s)

IF SOMETHING GOES SIDeways

SYMPTOM	DO THIS
Orb won't answer	Note the time; check Terminal tab; tell your host (AI budget may be spent)
Window frozen	Note your last click; try other windows; log it
App vanished	Victory! Note what you did; host relaunches with the diagnostic launcher
"Sim not available"	Build Sim tab → run the self-test → log the result
Numbers look wrong	That's Mission III — compare with PoB & write it down
You're lost	Ask the Orb: "what can you do?"

YOUR THREE MISSIONS

I — Verify	every checklist line: ✓ / ✗ / ?
II — Stress	climb the 5-rung question ladder
III — Fact-check	PoB · poe.ninja · Craft of Exile · trade site

THE DIVINE ORB SPEAKS

"Thank you, exile. Now go — click things that were never meant to be clicked, ask questions no sane player would ask, and catch me red-handed. The mirror remembers its friends."
